How can we try to find answers to our questions on our own?

? **Suppose your pen stops writing. What would you do?**

✔ ANSWER

I would follow the steps of the scientific method:

- **Question:** Why did my pen stop writing?
- **Guess:** The ink may have finished.
- **Test:** Open the pen and check the ink refill.
- If the refill is empty, my guess was correct. If not, I make a new guess (the ink may have dried up) and test that too.

Activity 1.1: Let us think and write

1.1 **Write about a similar problem that you tried to solve.**
What steps did you take?

💡 SAMPLE ANSWER

Problem: The table fan in my room did not start when I switched it on.

- **Observe:** The fan did not move and made no sound.
- **Question:** Why is the fan not working?
- **Guess 1:** There is no electricity. **Test:** I switched on the light. It glowed, so there was electricity. Guess 1 was wrong.

- **Guess 2:** The plug is loose. **Test:** I pushed the plug in properly and switched on again. The fan started.
- **Result:** The loose plug was the cause. Guess 2 was correct.

🤔 Activity 1.2: Let us think and write

1.2 **Describe a daily life situation where you think someone was following a scientific method.**

💡 SAMPLE ANSWER

My mother found that the curd had not set in the morning.

- **Question:** Why did the curd not set?
- **Guess:** The night was cold, so the milk cooled too fast.
- **Test:** Next evening she kept the bowl of milk (with a little curd added) in a warm place in the kitchen.
- **Result:** The curd set well by morning, so her guess was correct.

She observed, asked a question, guessed, tested and checked the result, just like a scientist.

🤔 Activity 1.3: Let us think and write

1.3 (i) **If you have to ask "Why?" about something, what would you ask about?**

> 💡 **SAMPLE ANSWER**
>
> Why do the leaves of some plants in our school garden turn yellow?

1.3 (ii) **Try to write down how you would attempt to find an answer to your question.**

> 💡 **SAMPLE ANSWER**
>
> - **Observe:** Look at which plants have yellow leaves and note where they grow and how often they get water.
> - **Guess:** The plants may be getting too little water (or too little sunlight).
> - **Test:** Water one yellowing plant regularly and leave another as it is for two weeks. Compare them.
> - **Analyse:** If the watered plant turns green again, the guess is correct. If not, make a new guess (e.g. sunlight) and test it.
> - If I cannot find the answer myself, I can ask my friends and teacher to help me.

🎉 **Chapter 1 done! Revise the answers once more tomorrow.**
