About the Book

Information and Communication Technology has become an integral part of our day to day life. It has altered how we communicate with friends, search for employment, find partners for marriage, operate businesses, play games, go shopping, and other activities. Almost everyone now has access to the internet and a smartphone, making it possible to digitally connect to the millions of online users all over the world.

The society has become more susceptible to risks from cybercrime as a result of the growing usage of online. A minor mistake or carelessness in how we manage our digital lives might invite cybercrimes, which can result in monetary loss, reputational harm, harassment, etc. The students are no exception. In recent years, students have become more prone to cyber-attacks.

Therefore, whenever the students use technology to connect to the outside world, whether, for gaming, social networking, or other purposes, they must be cautious and careful. So, they must be vigilant and careful while connecting digitally to the outside world whether for financial transactions, social networking, playing games or searching things on the internet etc.

ICT has become an integral part of school education as envisaged by the NEP 2020, so the risk of being susceptible to cyber crimes has increased manifold times. So, SCERT conceptualized the development of a book in an attempt to cover all aspects of cyber security and safety.

The information in this book is aimed at increasing students' knowledge about various cyber risks that can affect them and to provide some tips on how to protect themselves from cybercrime.

This book comprises four chapters. The first chapter details out the importance of technology in society, digital society and digital citizenship. The second chapter talks about the different types of cybercrimes being reported these days. Each cybercrime accompanies a case study of how cybercriminals commit that particular cybercrime on the victim. The third chapter outlines the significance of smart netizens, digital footprints, online grooming, WhatsApp, cyberbullying, online transactions, etc. Students will find a few related case studies in this module too. The fourth chapter outlines the existing cyber laws in India, digital detoxification, e-waste management, etc. To assess their level of understanding, each chapter has an assessment at the end of the chapter.

In a nutshell, the book provides a 360-degree perspective on cyber security. The book will help students to equip the necessary skills required to stay protected while using digital tools.
