

SENSIBLE NETIZEN

F3J8Q4

Learning Outcome

After this lesson, learners will be able to:

- Use netiquette for effective online communication.
- Understand various cyber laws.
- Recognize how cyber laws are violated and understand redressal procedure.
- Appreciate the importance of digital detoxification and its benefits.
- Develop an understanding of e-waste management.

4.1 NETIQUETTES

In English, the term Etiquette refers to the rules of polite and correct behaviour.

The term 'netiquette', which combines the words 'network' and 'etiquette', refers to a **set of rules and principles for communicating online in an acceptable or respectful way**.

Be Ethical

In English, the word Ethical means morally correct.

- **No copyright infringement**

  We shouldn't use content that is protected by copyright without the owner's or creator's consent.

- **Share your knowledge**

  Sharing information and expertise online enables others to access it.

Be Respectful

- **Respect privacy**

  Privacy refers to a state of solitude or freedom from intrusion. Everyone has the right to privacy and freedom of speech in the digital world as well.

- **Respect diversity**

  In a group or public forum, we should respect the diversity in terms of the expertise, experience, culture, and other differences among the participants.

Be Responsible

- **Prevent cyber bullying**

  In English, bullying refers to injure or terrorize someone less powerful than you by using your strength or power. Cyber bullying is bullying (to harass, threaten, or embarrass) that takes place online and involves the use of digital devices like cell phones, computers, and tablets.

- **Don't encourage the troll**

  An internet troll is someone who posts controversial or irrelevant comments in an online forum for fun or attention. The most effective technique to discourage trolls is to ignore their comments.

4.2 UNDERSTANDING CYBER LAWS IN INDIA

When the Internet was being developed, the founding fathers of the Internet hardly had any idea that the Internet could become such a revolution which could be misused for criminal activities and would require regulation. Due to the anonymous nature of

the Internet, it is possible to engage in a variety of criminal activities. Therefore, India required cyber laws to address and prevent such activities. Cyber laws are made so that citizens make use of the internet responsibly.

Cyber crimes can involve criminal activities that are traditional in nature, such as theft, fraud, forgery, defamation and mischief, all of which are subject to the Indian Penal Code. The abuse of computers has led to new types of crimes, and the Information Technology Act, 2000 deals with them.

Cybercrimes can be classified into two categories:

When a computer is the target, meaning it's used to attack other computers. Examples include hacking, virus and worm attacks, and denial-of-service (DOS) attacks.

When a computer is used as a weapon, meaning it's used to commit crimes in the real world. Examples include cyber terrorism, violations of intellectual property rights, credit card fraud, electronic funds transfer fraud, and distribution of pornography.

The Information Technology Act, 2000 (also known as ITA-2000, or the IT Act) is an Act of the Indian Parliament (No 21 of 2000) notified on 17 October 2000. It is the primary law in India dealing with cyber crime and electronic commerce.

4.2.1 Types of Violations & their Consequences

Section under IT Act, 2000	Offence	Penalty
Sec.65	Tampering with Computer source documents	Imprisonment up to three years, or with fine which may extend up to two lakh rupees, or with both

Sec.66	Hacking with Computer systems, Data alteration etc.	Imprisonment for a term which may extend to three years or with fine which may extend to five lakh rupees or with both
Sec.66A	Sending offensive messages through communication service etc.	Imprisonment for a term which may extend to three years and with fine
Sec.66B	Dishonestly receiving stolen computer resource or communication device	Imprisonment for a term which may extend to three years or with fine which may extend to rupees one lakh or with both
Sec.66C	Fraudulent use of electronic signature	Imprisonment for a term which may extend to three years and shall also be liable to fine which may extend to rupees one lakh
Sec.66D	Cheats by personating by using computer resource	Imprisonment for a term which may extend to three years and shall also be liable to fine which may extend to one lakh rupees
Sec.66E	Publishing obscene images	Imprisonment which may extend to three years or with fine not exceeding two lakh rupees, or with both
Sec.66F	Cyber terrorism	Imprisonment which may extend to imprisonment for life
Sec.67	Publishes or transmits unwanted material	Imprisonment for a term which may extend to three years and with fine which may extend to five lakh rupees & in the event of a second or subsequent conviction with imprisonment of either description for a term which may extend to five years and also with fine which may extend to ten lakh rupees
Sec.67A	Publishes or transmits sexually explicit material	Imprisonment for a term which may extend to five years and with fine which may extend to ten lakh rupees and in the event of second or subsequent conviction with imprisonment of either description for a term which may extend to seven years and also with fine which may extend to ten lakh rupees

Sec.67B	Abusing children online	Imprisonment for a term which may extend to five years and with a fine which may extend to ten lakh rupees and in the event of second or subsequent conviction with imprisonment of either description for a term which may extend to seven years and also with fine which may extend to ten lakh rupees
Sec.67C	Preservation of information by intermediary	Imprisonment for a term which may extend to three years and shall also be liable to fine
Sec.70	Un-authorised access to protected system	Imprisonment for a term which may extend to ten years and shall also be liable to fine
Sec.71	Misrepresentation to the Controller or the Certifying Authority for obtaining license or Electronic Signature Certificate	Imprisonment for a term which may extend to two years, or with fine which may extend to one lakh rupees, or with both.
Sec.72	Breach of Confidentiality and Privacy	Imprisonment for a term which may extend to two years, or with fine which may extend to one lakh rupees, or with both
Sec.72A	Disclosure of information in breach of contract	Imprisonment for a term which may extend to three years, or with a fine which may extend to five lakh rupees, or with both
Sec.73 & 74	Publishing false digital signature certificates	Imprisonment for a term which may extend to two years, or with fine which may extend to one lakh rupees, or with both

4.2.2 Redressal

The process one should follow after one come across a cyber crime is known as cyber crime redressal. We should be aware of the route to take to redress any such cyber threat or crime.

The Ministry of Home Affairs, Government of India, has set up an online portal to facilitate online complaints of cybercrimes, including online child pornography, child sexual abuse materials, and sexually explicit content (e.g., sexual harassment, abuse, rape and gang rape). For filing cybercrime complaint, one may log into the cybercrime portal of the Ministry of Home Affairs : **www.cybercrime.gov.in**

Police departments of states and union territories initiate investigations and legal processes based on the information provided by the complainants. The portal also has allows for anonymous reporting of child pornography and sexually explicit content.

Reporting to the police cyber cell

Children, parents or other concerned adults on their behalf, can approach the cyber cells of the State police to report cyber offences. Also, Cyber-crimes are not limited by jurisdiction, so, it can be reported anywhere.

Filing an FIR with the local police

You can also file an FIR with the local police station. It is not necessary to know the name and other details of the person responsible for the cyber crime to lodge an FIR and report all the details known about the cyber crime. The local police will then coordinate with the cyber cell in the investigation of the cyber crime.

Childline 1098

CHILDLINE 1098 is India's first 24-hour, free, emergency helpline for children in need of aid and assistance. A child or any adult on his or her behalf can dial 1098, the toll free number to seek help for their emergency needs.

NCPCR

The National Commission for the Protection of Child Rights (NCPCR) has set up an online portal to receive complaints regarding sexual abuse and related offences committed with child. A child or an adult on his or her behalf can report the matter at the POCSO e-box at the NCPCR site: https://ncpcr.gov.in/

Reporting

Child can take various reporting channels:

- **Social:** Child can talk to parents, teachers, counsellors about any cyber threat or crime or objectionable action or content.
- **Legal:** Child or any adult on his or her behalf can directly approach the police to report the matter.
- **Platform:** Child can do in-app reporting for any objectionable content.

Social media platforms have similar processes for reporting objectionable photos, videos, accounts, comments or any other content. One can report for objectionable content by choosing the appropriate reason on social media platforms.

4.3 DIGITAL DETOXIFICATION

A digital detox is a period of time in which a person refrains from using any Internet-connected electronic devices, such as smartphones and computers. Furthermore, a digital detox helps in reducing stress and focussing more on social interaction. It can also help to prevent device addiction. A digital detox allows you to reconnect with nature, exercise, and practice mindfulness.

Unplugging on a regular basis allows us to maintain a healthy balance between real life and digital activities. Finally, digital detox is a way to disconnect in order to reconnect.

Advantages of Digital Detoxification

Activities to avoid while practicing digital detox

The activities listed below should be avoided while engaging in a digital detox:

- Checking email
- Social media
- Utilising tablets or smartphones.
- Playing computer games
- Sending texts
- Observing TV shows

Warning signs that suggest putting down your digital devices

It may be best to disconnect if you spend a lot of time on digital devices and have any of the following symptoms:

- Stress
- Anger, irritability, or frustration
- Eye strain
- Sleep deprivation

4.4 E-WASTE MANAGEMENT

E-waste consists of electronic devices that are no longer in use.

When computers, laptops, mobile phones, televisions, tablets, music systems, speakers, printers, scanners, and other electronic devices reach the end of their useful life, they are considered e-waste.

Impact of e-waste on Environment

When e-waste is thrown or dumped carelessly in dumping grounds, certain elements or metals used in the manufacture of electronic products pollute the air, water, and soil. This is due to the fact that when these products come into contact with air and moisture, they leach. As a result, harmful chemicals seep into the soil and pollute it. Furthermore, when these chemicals reach and contaminate natural groundwater, they cause water pollution and make water unfit for human, animal, or agricultural use. When heavy metal-laden dust particles enter the atmosphere, they contribute to air pollution.

Impact of e-waste on Humans

Lead is one of the most commonly used metals in electronic devices (such as monitors and batteries). Lead poisoning occurs when lead enters the human body through contaminated food, water, air, or soil. Lead poisoning affects the kidneys, brain, and central nervous system. Lead poisoning is especially dangerous to children.

When e-waste, such as electronic circuit boards, is burned for disposal, the elements contained in them produce beryllium, a harmful chemical that causes skin diseases, allergies, and an increased risk of lung cancer. The burning of insulated wires to extract copper can result in neurological problems.

Management of e-waste

Three viable e-waste management methods are Reduce, reuse, and recycle.

Reduce: We should try to reduce e-waste generation by only purchasing electronic or electrical devices that we need. They should also be used to their full potential and discarded only when their useful life has expired. Good electronic device maintenance extends the life of the devices.

Reuse is the process of reusing electronic or electrical waste that has been slightly modified. Electronic equipment that is still operational should be donated or sold to someone who will use it. Refurbishing is the practice of reselling pre-owned electronic products at a lower cost after they have been serviced and are in good working condition.

Recycling is the process of transforming electronic equipment into a form that can be reused repeatedly in one way or another. Only items that cannot be repaired, renovated, or used again should be recycled. Many businesses and non-profit organizations are offering door-to-door pickup services to collect e-waste from residences and workplaces in an effort to promote recycling of e-waste.

ASSESSMENT

1. What is the purpose of netiquette?
   - A. To provide online users with proper online behavior guidelines
   - B. To increase the speed of the internet
   - C. To provide a way for online users to get free access to websites
   - D. To protect the privacy of online users

   Ans. A. To provide online users with proper online behavior guidelines

2. What is the main legislation governing cyber laws in India?
   - A. The Information Technology Act
   - B. The Copyright Act
   - C. The Trademark Act
   - D. The Patent Act

   Ans. A. The Information Technology Act

3. What are the consequences of not following cyber laws in India?
   - A. Legal penalties, fines and imprisonment
   - B. Reduced internet speed
   - C. Increased online privacy
   - D. Free access to websites

   Ans. A. Legal penalties, fines and imprisonment

4. What is digital detoxification?
   - A. The process of disconnecting from digital devices and technology to improve mental health and well-being

B. The process of removing viruses from digital devices

C. The process of upgrading digital devices to the latest technology

D. The process of increasing online privacy

Ans. A. The process of disconnecting from digital devices and technology to improve mental health and well-being

5. What is the significance of e-waste management?

A. To reduce the negative impact of electronic waste on the environment and public health

B. To increase the speed of electronic devices

C. To provide free access to websites

D. To protect online privacy

Ans. A. To reduce the negative impact of electronic waste on the environment and public health

6. What is the purpose of cyber laws in India?

A. To regulate online activities and protect citizens from online crime and harassment

B. To increase internet speed

C. To provide free access to websites

D. To increase online privacy

Ans. A. To regulate online activities and protect citizens from online crime and harassment

7. What is an example of cybercrime in India?

A. Hacking into someone's email account

B. Using someone else's Wi-Fi without permission

C. Posting fake news on social media

D. All of the above

Ans. D. All of the above

8. What is the most effective way to prevent cybercrime?

A. By using strong passwords and regularly updating them

B. By avoiding public Wi-Fi

C. By being cautious of emails from unknown sources

D. All of the above

Ans. D. All of the above

9. What is one way to practice digital detoxification?

A. Spending more time on digital devices

B. Increasing social media usage

C. Spending time offline and engaging in non-digital activities

D. Spending more time on video games

Ans. C. Spending time offline and engaging in non-digital activities

10. What is the role of governments in managing e-waste?

A. To provide adequate funding for e-waste management

B. To enforce regulations on proper e-waste disposal

C. To educate the public on the importance of e-waste management

D. All of the above

Ans. D. All of the above
