FSB 1 · Passing — Circle Time: Point of Release

1 **Observe and explain in your own words the point of release of the ball while throwing. Discuss the difference between the throws when released from the medial line of the body and the one which is not through from the medial line of the body.**

💡 SAMPLE ANSWER

The **point of release** is the moment the ball leaves the hand. In an overhead pass, it is at the **highest point** of the arm's upward and forward stretch, with a wrist snap.

- **Released along the medial (middle) line of the body:** arm, shoulder and body push in one straight line, so the pass is **straight, accurate and powerful**.
- **Not released along the medial line** (from the side): the ball tends to curve or go sideways, is **less accurate** and has less force.

So we should release the ball high, in line with the middle of the body, and follow through towards the target.

FSB 2 · Catching — Circle Time: Eye-hand Coordination

1 **Discuss the eye-hand coordination required for learning the catching skill.**

💡 SAMPLE ANSWER

Eye-hand coordination means the eyes and hands work together.

- **Eyes:** keep the eyes fixed on the ball and follow its path from the thrower's hand to your own hands.
- **Hands:** move the hands in front of the torso to the right place in time, fingers spread wide, elbows slightly bent.
- **Timing:** close the fingers at the right moment and pull the ball back towards the body to absorb its force.

Good eye-hand coordination helps us catch safely without dropping the ball. Games like 'Say and Catch' improve it.

⭐ FSB 3 · 10-pass — Circle Time: Importance of Correct Form

1 **Discuss the correct form of passing and catching the ball. Also, elaborate the different types of foul and their rules.**

💡 SAMPLE ANSWER

Correct passing: feet shoulder-width apart; hold the ball in one hand above the head with fingers spread; elbow bent at 90°; release at the highest point with a wrist snap; follow through towards the teammate's torso.

Correct catching: knees slightly bent, lean slightly forward; hands in front of the torso, fingers spread; eyes on the ball; catch with loose wrists and firm fingers; bring the ball back towards the body.

Common fouls (rules):

- Touching the ball with the feet (below the knee) is not allowed.
- Pulling, hitting or punching the ball out of an opponent's hands is not allowed.
- Taking more than **3 steps** with the ball, or holding it for more than **3 seconds**, is a foul.
- Pushing, holding or tripping an opponent is a foul.
- Court players cannot enter the goal area (only the goalkeeper can).

⭐ FSB 4 · Dribbling — Circle Time: Creative Lead-ups

1 **Design a new game which is as creative as the lead-up activity.**

💡 SAMPLE ANSWER

Game: Dribble Tail Tag

- Each player tucks a cloth 'tail' in the back of the waist and dribbles a ball inside a marked area.
- While dribbling, players try to pull other players' tails with the free hand.
- A player who loses the tail, loses control of the ball or stops dribbling goes out.

- The last player still dribbling with a tail wins.

It practises dribbling with the head up, using both hands and moving into open spaces.

⭐ FSB 5 · Obstacle Dribbling — Circle Time: Footwork and Body Gestures

1 **How do you anticipate the possible challenges by studying the footwork and body gestures of your opponent team member?**

💡 SAMPLE ANSWER

- I watch which way the opponent's feet and hips point; they usually move in that direction.
- If the knees are bent and weight is forward, the opponent is ready to rush in and block or steal the ball.
- Eyes and shoulders show where they plan to move or reach.
- A small step or lean to one side may be a fake; I wait for the real move.

Seeing these signs early, I change my dribble, protect the ball with my body or pass it to an open teammate.

⭐ FSB 6 · Shoot the Ball — Circle Time: Doing Things Differently

1 **What have the instructor and the shooter done differently to improve their**

performance?

💡 SAMPLE ANSWER

- **Instructor:** gave short, clear and exact instructions (left, right, higher, lower, 'throw now'), spoke calmly and corrected after every throw.
- **Shooter:** could not see, so listened carefully, trusted the instructor, used the feel of the body (stance, arm angle, force) and changed the throw after each try.

Both learnt to communicate and trust each other, which improves teamwork and shooting.

⭐ FSB 7 · Dodge Ball — Circle Time: Footwork and Anticipation

1. **Discuss what type of footwork defenders used for dodging the throwers and how the throwers anticipated the movements of the defenders.**

💡 SAMPLE ANSWER

Defenders' footwork: stayed on the toes with knees bent; took short, quick side steps; jumped, twisted or changed direction suddenly; kept watching the thrower's arm.

Throwers' anticipation: watched the direction a defender was moving and threw ahead of them; noticed when a defender was tired or off balance; faked a throw to make the defender move first; passed quickly around the circle to a better-placed thrower.

⭐ FSB 8 · Dribble and Shoot — Circle Time: Taking Defeat Gracefully

1 **Prepare a short write-up about how you feel after a defeat.**

💡 SAMPLE ANSWER

After a defeat

When my team loses, I feel sad and a little upset at first. But I shake hands with the winners and congratulate them. Then I think about what went wrong, like missed passes or poor shots, and what I can practise. I remember that every player loses sometimes. A defeat teaches me to work harder and play better as a team next time.

🧪 FSB 9 · Pass and Shoot — Circle Time: Reviewing the Activity

1 **Make a list of the formations and positions for tagging the opponents.**

💡 SAMPLE ANSWER

- **Spread out wide:** taggers stand in different parts of the court so a pass can reach any area.
- **Triangle:** three taggers make a triangle around a runner, so passes are short and safe.
- **Trap near the boundary/corner:** push runners towards the lines or corners where they cannot escape.
- **Semicircle / circle around a runner:** close in from many sides.
- **Pass to the nearest tagger** who is in the best position, since the player with the ball cannot move.

⭐ FSB 10 · Shootout Tournament — Circle Time: Anticipation

1 **Elaborate how do you anticipate the movement of a goalkeeper by looking at their footwork and gesture.**

💡 SAMPLE ANSWER

- If the goalkeeper's weight shifts to one foot or they lean to one side, I shoot to the other side.
- If the goalkeeper stays low (knees bent), I shoot high into the top corners; if the arms are high, I shoot low.
- If the goalkeeper moves forward off the goal line, I can throw over them (lob) or to the far corner.

- If the goalkeeper's eyes follow my arm, I can fake a shot first and then shoot.

📝 FSB 11 · Goalkeeper's Defensive Skills — Circle Time: Anticipating the Shot

1 **Share your experience stating how you anticipated the direction and speed of the ball from the movements of the shooter.**

💡 **SAMPLE ANSWER**

When I was the goalkeeper, I watched the shooter's body, not only the ball.

- The **direction** the shooter's non-throwing arm and shoulder pointed told me where the ball would go.
- A **high jump and full arm swing** meant a fast, strong shot; a short arm action meant a slower shot.
- The release point showed if the ball was coming high or low.

So I took quick side steps early and raised or lowered my arms to block the ball.

⭐ FSB 12 · Blocking — Circle Time: How to Block?

1 **Discuss how did you anticipate the trajectory of the ball from the movements of the opponent and decide your hand positions for blocking the ball.**

💡 SAMPLE ANSWER

- I watched the shooter's eyes, arm and shoulder to know the direction of the throw.
- **Arm high above the head** → ball comes high, so I raised both arms up.
- **Arm at the side or low** → ball comes low or bounces, so I kept my hands lower.
- I timed my jump with the shooter's release and stood between the shooter and the goal, arms raised to block the line of sight.

🧪 FSB 13 · Assimilation — Circle Time: Reviewing the Activity

1 **Write a note about the patterns of play in the opponents' teams.**

💡 SAMPLE ANSWER

Note: Opponents' patterns of play

- They made quick, short passes to keep the ball and find open players.
- One or two strong players took most of the shots.
- They often attacked from one side of the court.

- In defence, they stood in a line in front of their goal area and raised their arms to block.

Knowing these patterns helps our team plan where to defend and how to attack.

2 **Discuss what helps you to take the defeat gracefully.**

💡 **SAMPLE ANSWER**

- Remembering that the game is for fun, fitness and learning.
- Shaking hands with and praising the winning team.
- Not blaming teammates; supporting each other.
- Learning from mistakes and practising more.
- Encouragement from teachers, coaches and friends.
